

Project 3 Refined Spec

Overview

This project consists of two android application that communicate using implicit intents.

App 1 - Chicago Guide Launcher

- Helps visitors decide wheter they want to explore attractions or restaurants in Chicago
- Sends implicit broadcast intents depending on the user's choice

App 2 - Chicago Explorer

- Recieves intent from App 1
- Displays detailed information about chicago attractions or restaurants.
- Uses fragments and Webview to display official websites for selected items.

Both applications run on Android 16 (API Level 36).

App 1:

Purpose: A launcher that allows users to choose between exploring Chicago attractions or Chicago restaurants.

Main Activity Layout:

2 Read-Only TextViews that describe the meaning of the buttons to the users

2 Buttons. The first button will display a short toast message before broadcasting an implicit intent to launch AttractionActivity. The second would display a short message before broadcasting an implicit intent to launch RestaurantsActivity.. These intents will be received by app 2.

App 2:

There are 2 activities in app 2: AtracctionsActivity which displays information about Chicago attractions and RestaurantsActivity which displays information about Chicago restaurants.

Each activity contains 2 fragments:

Fragment 1: List fragment

Displays a list of fragments.

Example Attractions List:

- Lincoln Park Zoo
- Navy Pier
- Museum of Science and Industry
- Art Institute of Chicago

- The Shedd Aquarium

Example Restaurants List:

- Gyukaku Streeterville
- Portillos
- Girl & The Goat
- Lou Mitchells
- Wildberry Pancakes and Cafe

Behaviour: displays a selectable list. The selected item remains highlighted until another item is selected.

Second Fragment: Displays the official website of the selected location using A WebView widget.

Layout:

Initial Selection: only fragment 1 is visible.

After Item selection, the left side is fragment 1, taking up $\frac{1}{3}$ of the display. The right side is fragment 2, taking up $\frac{2}{3}$ of the display. Pressing the back button returns the activity to just displaying fragment 1.

Action Bar: Displays the app name and overflow menu. The action bar is always visible regardless of the orientation.

Menu Options: Attractions or Restaurants. Selecting either will go to their respective activity.

The application is optimized for landscape mode.

The application must retain state during **configuration changes**, such as:

- Rotating the device
- Switching orientation

The following must be preserved:

- Selected list item
- WebView page currently displayed
